

BIOGRAPHICAL SKETCH

Full Name: Anastasia Nikolaevna Borovik

Age: 24

Education: Moscow State University Chemistry faculty (6th year of specialty)

Laboratory: Department of Medicinal Chemistry Laboratory of Medicinal Chemistry.

I have been studying in MSU since 2016 and working in the Laboratory of Medicinal Chemistry since 2018. I have chosen this laboratory for my diploma because I was always interested in medicinal chemistry, especially in drug discovery and development. Now our laboratory works on a wide range of problems and one of the most important ones is the discovery of new antimicrotubule drugs based on C4 podophyllotoxin esters. My contribution to this research is represented by carrying out molecular modelling studies. I find this investigation very perspective and I'm going to work on it in future.
