Abstract

Runt-related transcription factor 1 (RUNX1) is frequently involved in the progression of acute leukemia. However, emerging and discoverable *RUNX1* somatic mutations, *RUNX1* expressional signatures in normal tissues and cancers, and *RUNX1*'s clinical significance in many cancer types have attracted attention for considering *RUNX1* as a biomarker for cancer. Recent discoveries have demonstrated the indirect and direct biological functions of RUNX1 in modulating cancer metastasis, proliferation, angiogenesis, cancer stemness and chemoresistance to anticancer drugs, warranting the further investigations of the underlying mechanisms to provide knowledge for developing a novel therapeutic approach. In this review article, we focused mainly on recent research developments involving oncogenic activities of RUNX1 by summarizing and integrating *RUNX1* somatic mutations, clinical trials, transcriptome data, clinical information and the discoveries related to the RUNX1-induced signaling pathway in modulating malignant phenotypes. Furthermore, a comprehensive demonstration of *RUNX1* RNA expression in a pancancer panel and specific normal cell types at single-cell level were presented, and the results suggest potential sites and cell types of RUNX1-related tumorigenesis. With this review

Query DataSets for GSE120216

Status	Public on Apr 18, 2019
Title	Identifying transcripts that are transcriptinoally regulated by CBFB and RUNX1 using RNAseq
Organism	Homo sapiens
Experiment type	Expression profiling by high throughput sequencing
Summary	Using RNAseq to identify differentially expressed transcripts between CBFB wild type (WT) and knockout (KO) or between RUNX1 wild type (WT) and knockout (KO) MCF10A cells.
Overall design	Three repeats for CBFB KO and CBFB WT MCF10A cells. Four repeats for RUNX1 KO and RUNX1 WT MCF10A cells. One CBFB KO clone (#751) and two RUNX1 KO clones (5008 and 5010) were used.

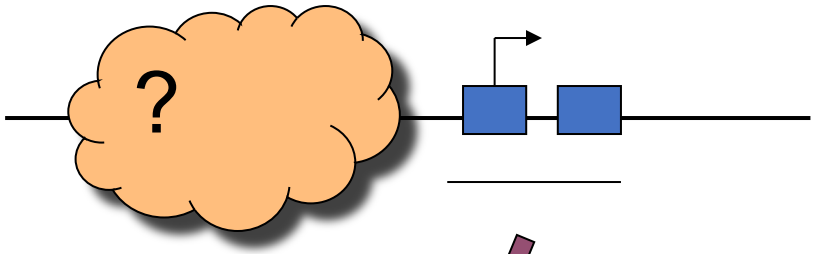
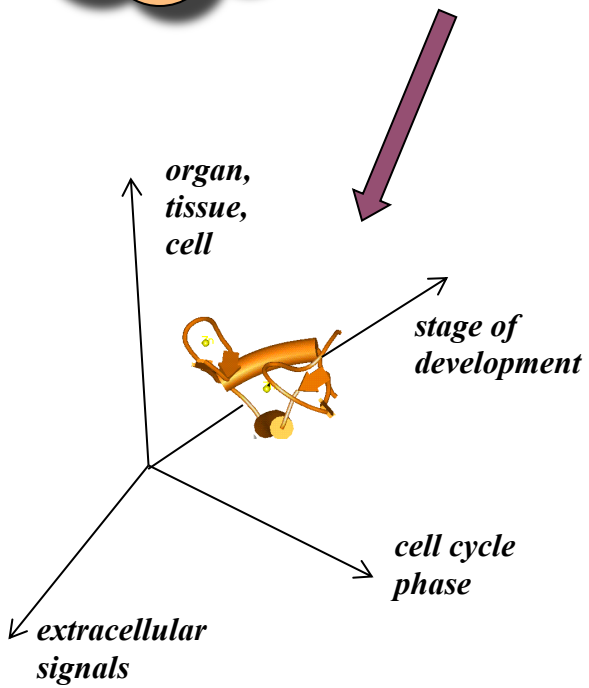
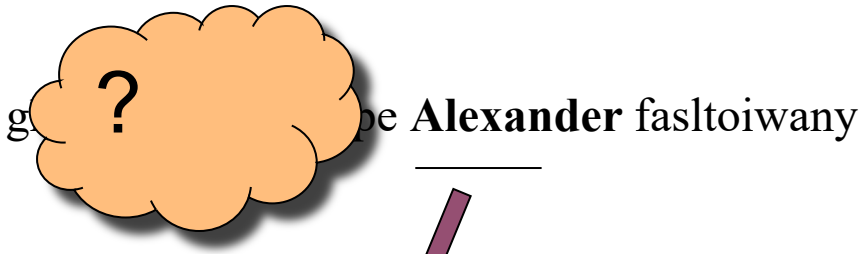
Non-coding DNA

we need to know “regulatory code”

(Epi-Genetic code)







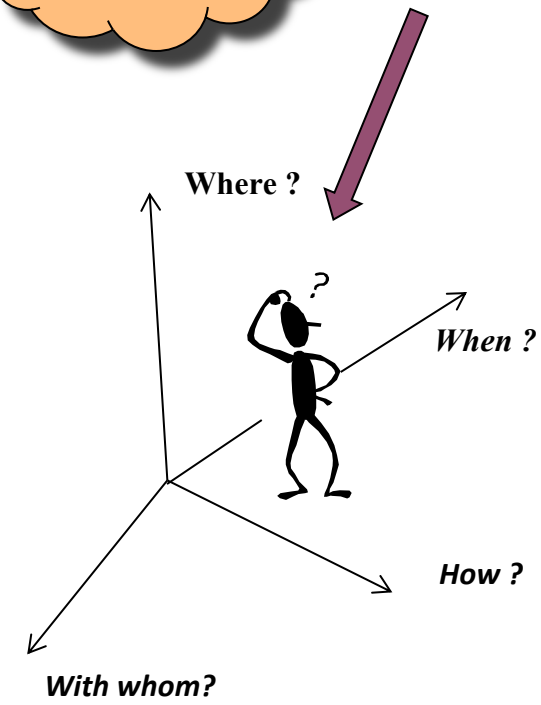


Таблица 17-2

Порядок символов в кодонах, полученный путем использования принципа связности, состава кодонов (см. табл. 17-1) и списка мутационных замен аминокислот в белках [Ратнер, 1966]

1↓2→	U	C	A	G	↓3
U	UUU Phe	UCU Ser	UAU Tyr	UGU Cys	U
	UUC Phe	UCC Ser	UAC (Tyr)	UGC Ser	C
	UUA Leu	UCA Thr	UAA Lys	UGA ?	A
	UUG Leu	UCG [Ser]	UAG ?	UGG (Try)	G
C	CUU Leu	CCU Pro	CAU (His)	CGU Arg	U
	CUC Leu	CCC Pro	CAC His	CGC Arg	C
	CUA Gln	CCA Pro	CAA Gln	CGA Arg	A
	CUG [Leu]	CCG ?	CAG ?	CGG ?	G
A	AUU Ile	ACU Asn	AAU Asn	AGU ?	U
	AUC Ile	ACC Thr	AAC Asn	AGC Ser	C
	AUA Ile	ACA Thr	AAA Lys	AGA Arg	A
	AUG Met	ACG [Thr]	AAG ?	AGG ?	G
G	GUU Val	GCU Ala	GAU Asp	GGU Gly	U
	GUC [Val]	GCC Ala	GAC Asp	GGC Gly	C
	GUA Glu	GCA Ala	GAA Glu	GGA Gly	A
	GUG [Val]	GCG ?	GAG ?	GGG ?	G

Примечание. Подчеркнуты кодоны, которые в дальнейшем оказались ошибочными. В круглых скобках — кодоны, в которых порядок символов установлен неоднозначно, в квадратных — кодоны, добавленные в ходе процедуры вывода для объяснения мутаций и связности. Из 64 кодонов 47 совпадают с кодом Ниренберга, 6 не совпадают, а 11 (см. табл. 17-1) не были определены по составу (из них 9 с *G* в третьих позициях кодонов).

Introduction

Description

Eyes absent homolog 2, a transcription coactivator that acts in TGF-beta signaling, epithelial to mesenchymal transition, apoptosis, and somitogenesis, may play a role in eye development; SNPs correlate with non-small-cell lung carcinoma

Gene symbol

EYA2

Synonyms

EAB1; EYA2; MGC10614; RP5-890O15.2; Eyes absent homolog 2; eyes absent homolog 2 (Drosophila); EYA transcriptional coactivator and phosphatase 2

3. Results

Heatmap of differentially expressed genes in RUNX1 WT vs. RUNX1 KO

A heatmap of all differentially expressed genes playing a potential regulatory role in the system (enriched in TRANSPATH® pathways) is presented in Figure 2.

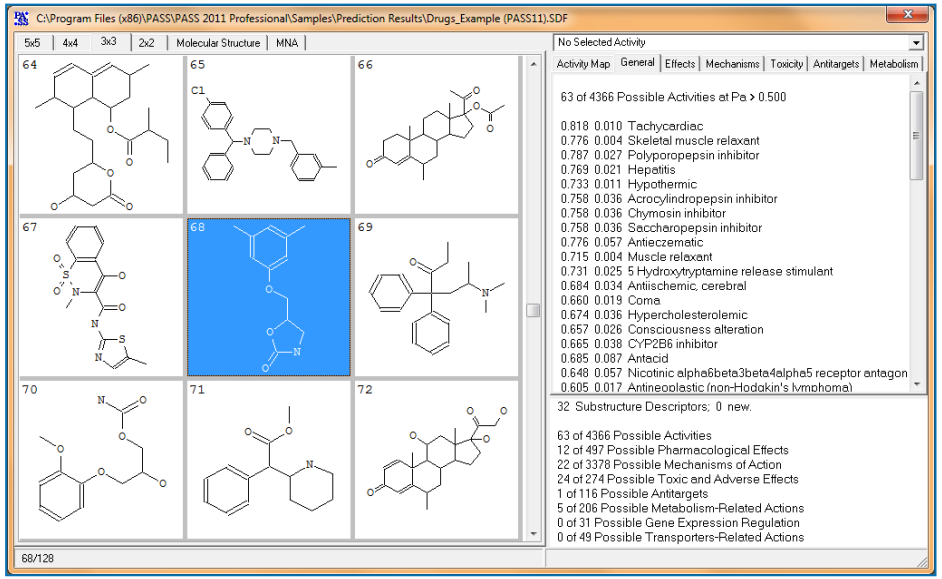
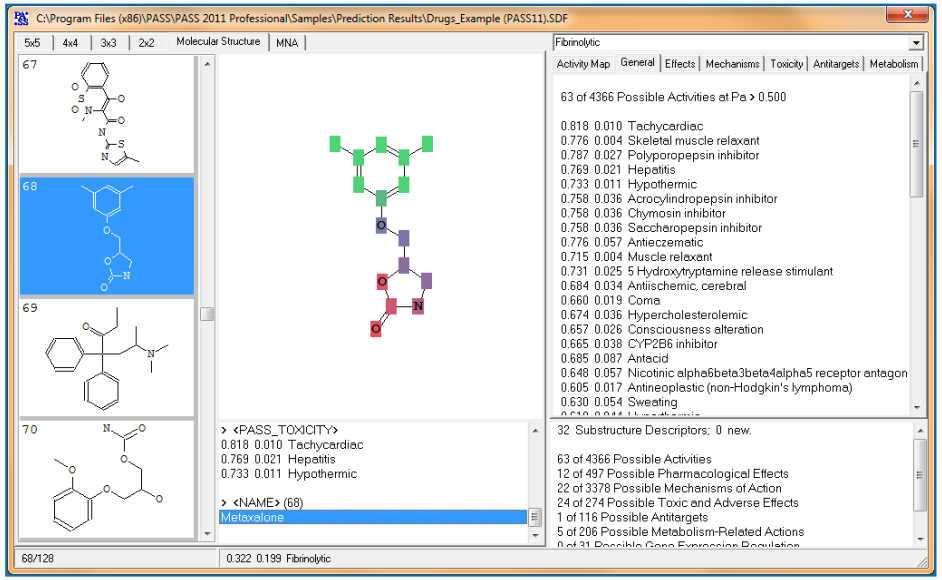
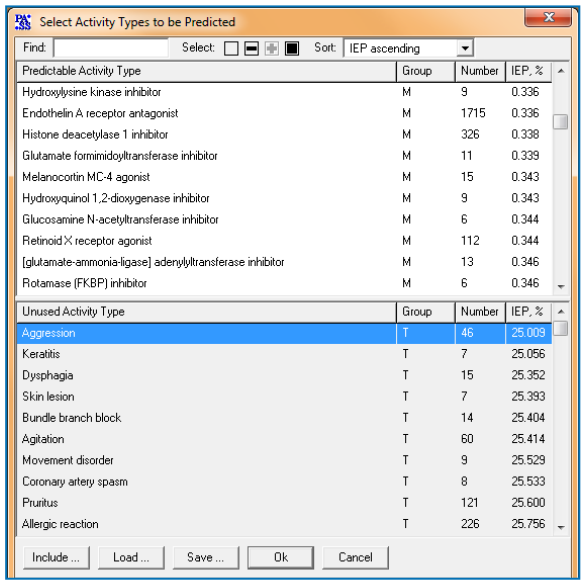
PASS

The acronym PASS stands for Prediction of Activity Spectra for Substances. PASS performs an instant prediction and computational evaluation of biological activity spectra for organic chemical compounds.

PASS results can be further interpreted via the PharmaExpert tool and combined with the structure-activity relationship models built in GUSAR.







Target activity score

$$T\text{-}score(s) = \frac{|T|}{|T| + w(|AT| - |T|))} \sum_{m \in M(s)} \left(pa(m) \sum_{g \in G(m)} IAP(g) optWeight(g) \right),$$

M(s) is the set of activity-mechanisms for the given structure *s*

G(m) is the set of targets (converted to genes)

IAP(g) is the invariant accuracy of prediction

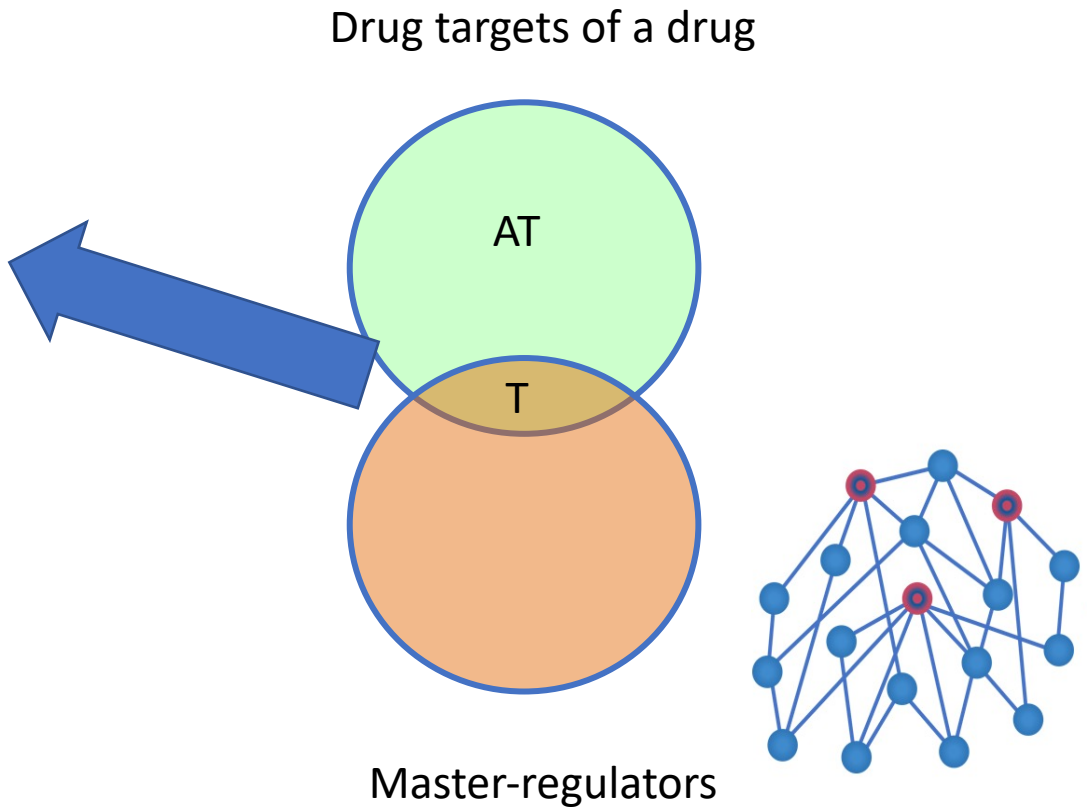


Table 15. Prospective drugs, predicted by PASS software to be active against the identified drug targets with predicted activity against the studied disease(s) (drug candidates predicted with the cheminformatics tool PASS)
See full table →

Name	Target names	Drug score	Target activity score
Disulfiram	SOD1, MAPK8, LAP3, MAPK12, MAPK9, HSPD1, MAPK6	81	0.13

Table 16. Prospective drugs, predicted by PASS software to be active against the identified drug targets, though without cheminformatically predicted activity against the studied disease(s) (drug candidates predicted with the cheminformatics tool PASS)
See full table →

Name	Target names	Drug score	Target activity score
2,5,7-Trihydroxynaphthoquinone	MAPK8, DUSP23, MAPK9, SENP6, EPM2A, MAPK6, PTEN...(more)	97	0.92
Busulfan	DUSP23, EPM2A, PTPN2, PTPRS, EYA2, PTEN, CDC25C...(more)	96	1.74
Pentabromophenol	LAP3, DUSP23, EPM2A, PTPN2, PTPRS, EYA2, HDAC3...(more)	96	2
7-[4-(Dimethylamino)Phenyl]-N-Hydroxy-4,6-Dimethyl-7-Oxo-2,4-Heptadienamide	HDAC4, HDAC2, HDAC3	96	1.62
Iodophenyl	RPS6KA3, ROCK2, CSNK1E, RPS6KA1, AURKB, VRK1, ARAF...(more)	95	5.52

As the result of drug search we propose the following drugs as most promising candidates for treating the pathology under study: Lapatinib, seliciclib, Disulfiram and 2,5,7-Trihydroxynaphthoquinone. These drugs were selected for acting on the following targets: BIRC5, RPS6KA2, MAPK12 and DUSP9, which were predicted to be active in the molecular mechanism of the studied pathology.

The selected drugs are top ranked drug candidates from each of the four categories of drugs: (1) FDA approved drugs or used in clinical trials drugs for the studied pathology; (2) repurposing drugs

Busulfan

☆ Star 0

Summary	**Busulfan** is an alkylating agent used to treat chronic myelogenous leukemia.
Brand Names	*Busulfex, Myleran*
Generic Name	Busulfan
DrugBank Accession Number	DB01008
Background	Busulfan is a bifunctional alkylating agent, having a selective immunosuppressive effect on bone marrow. It is not a structural analog of the nitrogen mustards. It has been used in the palliative treatment of chronic myeloid leukemia (myeloid leukemia, chronic), but although symptomatic relief is provided, no permanent remission is brought about. According to the Fourth Annual Report on Carcinogens (NTP 85-002, 1985), busulfan is listed as a known carcinogen.
Type	Small Molecule
Groups	Approved, Investigational
Structure	Weight	Average: 246.302 Monoisotopic: 246.02317956
Chemical Formula	$C_6H_{14}O_6S_2$

Provided by ClinicalTrials.gov and the registries and data partners contributing to the OpenTrials project.
