

Anton Chugunov, Ph.D., has graduated from Biophysical department at the Biological faculty of the Moscow State University in 2003 and since then is working in the Shemyakin–Ovchinnikov Institute of Bioorganic Chemistry, Moscow (nowadays, senior researcher, head of the [Group of *in silico* analysis of membrane proteins structure](#)). Scientific interest: modeling of the atomistic structure and dynamics of the membrane proteins, mostly — receptors and ion channels, and their interactions with ligands: small molecules and peptides.

As an everlasting hobby, founded and heading as editor-in-chief scientific/popular website about modern biology biomolecula.ru.
