

Massyel Martínez-Cortés is a Mexican biochemist currently pursuing a Master's degree in Biochemical Sciences at National Autonomous University of Mexico. She has been actively engaged in research projects related to pharmacogenomics and has accumulated three years of hands-on experience in molecular biology diagnostic laboratories. Currently, she is conducting research in the field of chemoinformatics under the guidance of Dr. José Luis Medina Franco within the DIFACQUIM research group. Her current project is focused on the discovery of activating compounds for the DNMT1 protein, aiming to make contributions to the field of epigenetics.
