

Biosketch: Ms. Urvashi Tiwari

Ms. Urvashi Tiwari is a dedicated and accomplished professional with a strong academic background in genetics and genomics. She completed her Bachelor's degree in Genetics & Genomics and later earned a Master's degree in Plant Science, both from the prestigious University of Lucknow, India. Her academic prowess was further validated when she qualified the National Eligibility Test (NET) for Lectureship in 2017, showcasing her commitment to education and research.

Ms. Tiwari has garnered valuable teaching experience during her tenure as an Assistant Professor at The Isabella Thoburn (IT) College in Lucknow, India, where she contributed to the academic growth of her students for three years.

Currently, Ms. Urvashi Tiwari is pursuing a Ph.D. in the Department of Biosciences at Integral University, Uttar Pradesh, India. Her research focuses on the evaluation of selected indigenous spices and herbs-derived bioactive compounds as Sterol Regulatory Element Binding Proteins Inhibitors and their potential implications in the context of breast cancer. This research demonstrates her dedication to advancing our understanding of the intricate relationship between bioactive compounds and their impact on breast cancer, a subject of critical importance in the field of biosciences.

Ms. Tiwari's multifaceted academic journey, coupled with her passion for research and teaching, positions her as a promising and driven professional in the field of biosciences, with the potential to make significant contributions to our understanding of cancer biology and the development of novel therapies.
